## Planting instructions for larch seeds

In just a few simple steps,  
you could grow something  
big.

1. Plant seed in a small pot with  
potting soil, approx. 0.5 cm deep.

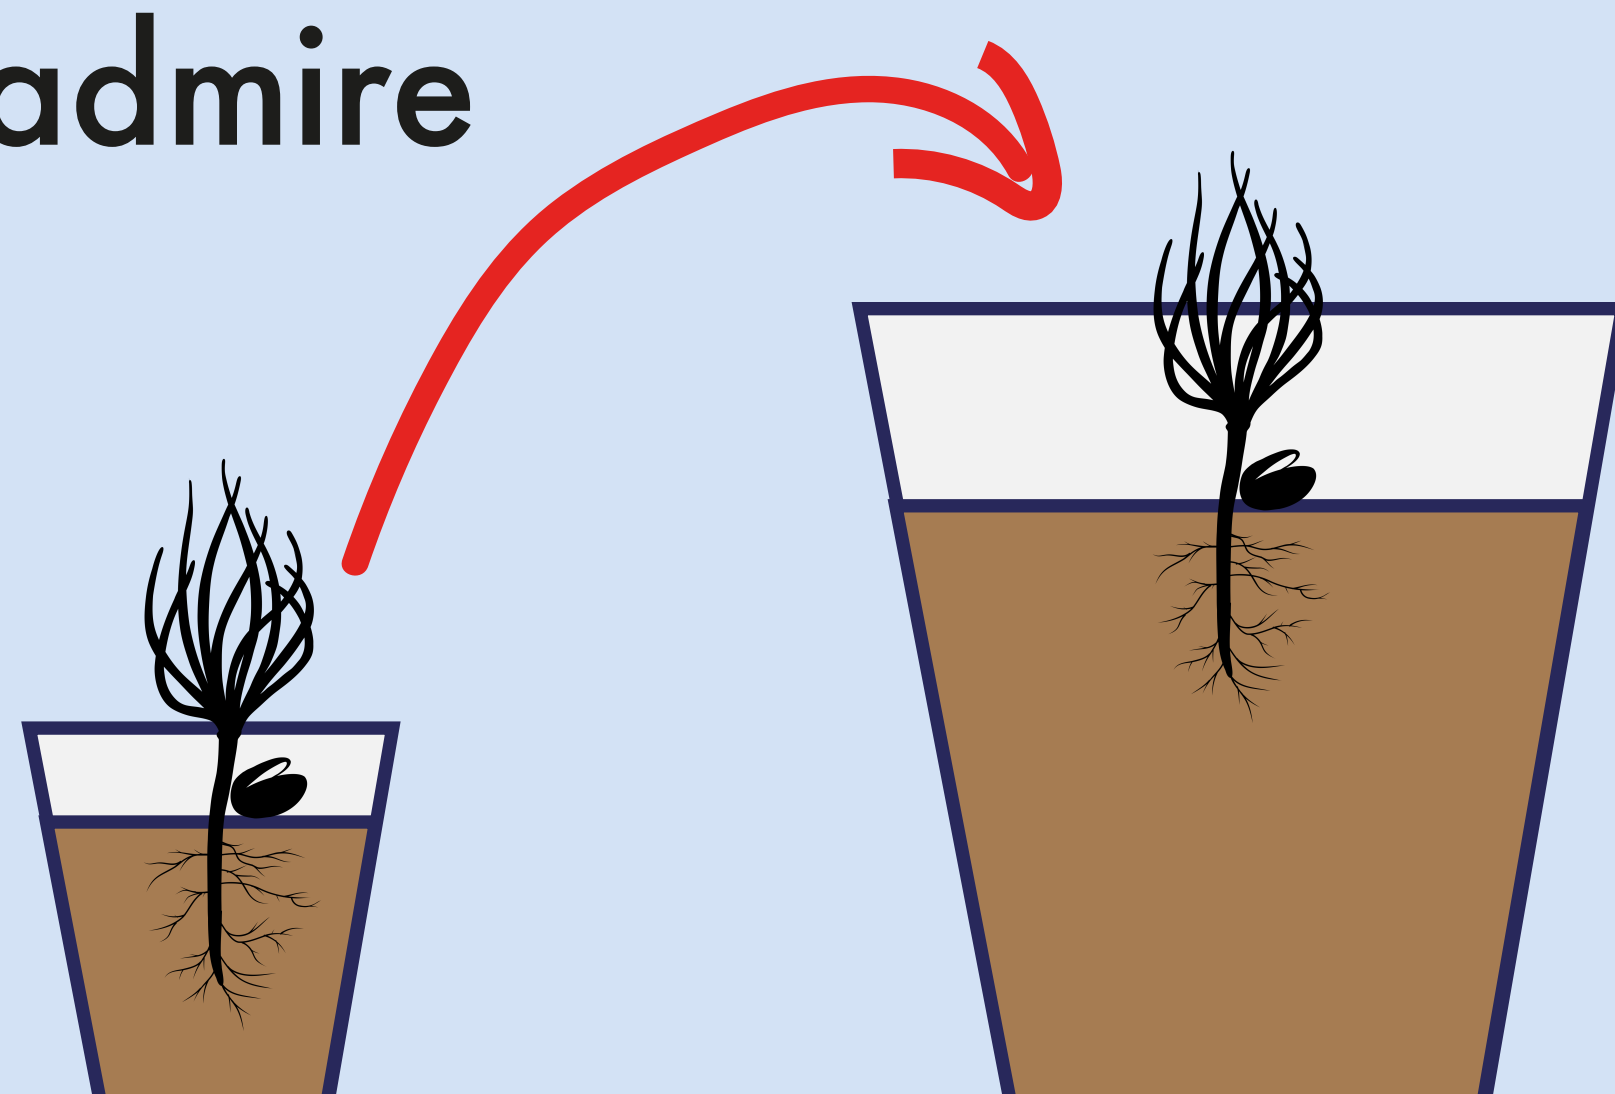

2. Expose to sunlight without direct  
Sun exposure, the seed will  
germinate.

3. Regular watering and  
moist soil is good for the seedling.

4. When the seedling reaches a  
certain size, repot it and continue  
to water and admire  
its growth.

5. Share the pictures of your tree  
with us on Social media.

The Seeds inside our cards  
are Larch tree seeds. These  
special seeds are made to grow at  
an altitude of about 1500 m above sea  
level. We wish you success in growing your  
very own Larch tree!

Kind regards, The Wald und Klima Ursern  
Team.

We are happy to answer any questions you may have!
